

matmi

Taste the World

MAT + MI

맛 + Mi?

Korean “taste” + Hungarian “what?”

A Korea × Hungary team project.

AI + AR/XR + FOOD

See unfamiliar food before you order.

MATMI helps travelers understand local food with camera recognition, 3D/AR, and simple food information.

It started with one bite of gimbap.

We found the problem from a real moment in our team.

HACKATHON DAY 1

On the first day, gimbap became a simple topic of conversation in our team.

The ingredients were easy to explain. But the taste, texture, and familiar comparisons were much harder to describe.

What we learned

Knowing the words is not the same as knowing the food.

THE SAME PROBLEM HAPPENS WHEN WE TRAVEL

- **Translation gives a name.**
But users still do not know the look, taste, or texture.
- **People leave the menu to search.**
Translate → search → images → reviews → back to the menu.
- **The real problem is the imagination gap.**
It's hard to imagine what the food will actually taste like.

Who needs this most?

People who want local food but do not want to order blind.

PRIMARY USER

Independent international traveler

Food-curious

Smartphone-first

Local culture

Main need

“Help me understand this dish fast, so I can decide if I want it.”

Secondary user: International students

AS-IS

Menu → Translate → Search → Images → Reviews → Menu

TO-BE WITH MATMI

Scan → See → Understand → Decide

One flow. No app switching.

LESS SEARCH

MORE CONFIDENCE

MORE LOCAL FOOD

MATMI makes unfamiliar food easier to understand.

It shows the food, explains it simply, and connects it to the user.

WHAT MATMI DOES

1. Recognize the menu with *OCR
2. Show it in 3D / AR
3. Explain taste and texture
4. Compare it with familiar food
5. Match it to the user's taste

POINT → SEE → UNDERSTAND → DECIDE

WHY NOT JUST TRANSLATION?

- **Translation tells you just the word.**

MATMI helps you picture the food.

- **Images show one photo.**

MATMI links the menu, 3D view, food info, and personal taste.

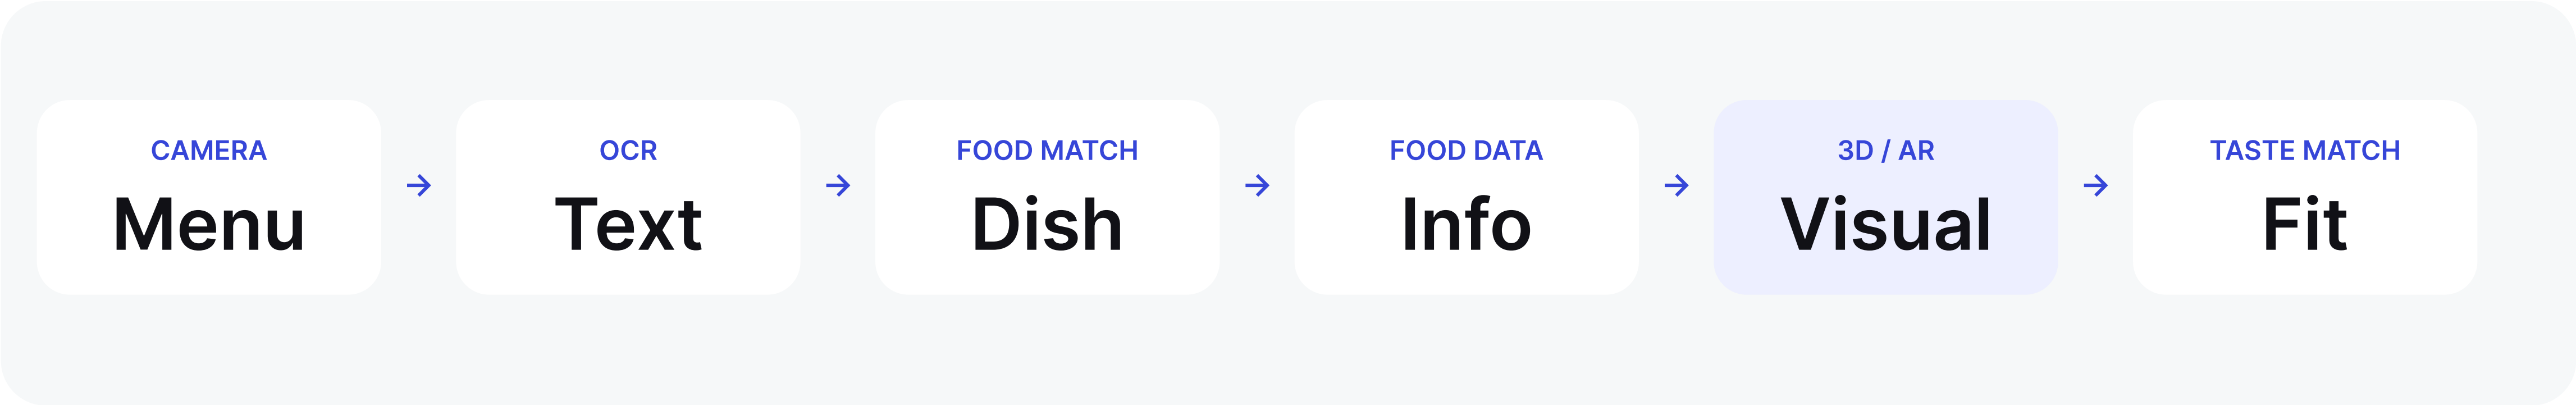

- **Search gives everyone the same information.**

MATMI makes it personal.

*OCR (Optical Character Recognition) is a technology that reads text from images or camera input and converts it into digital text.

One simple flow from camera to choice.

The technology works behind the scenes.

WHAT THE USER GETS

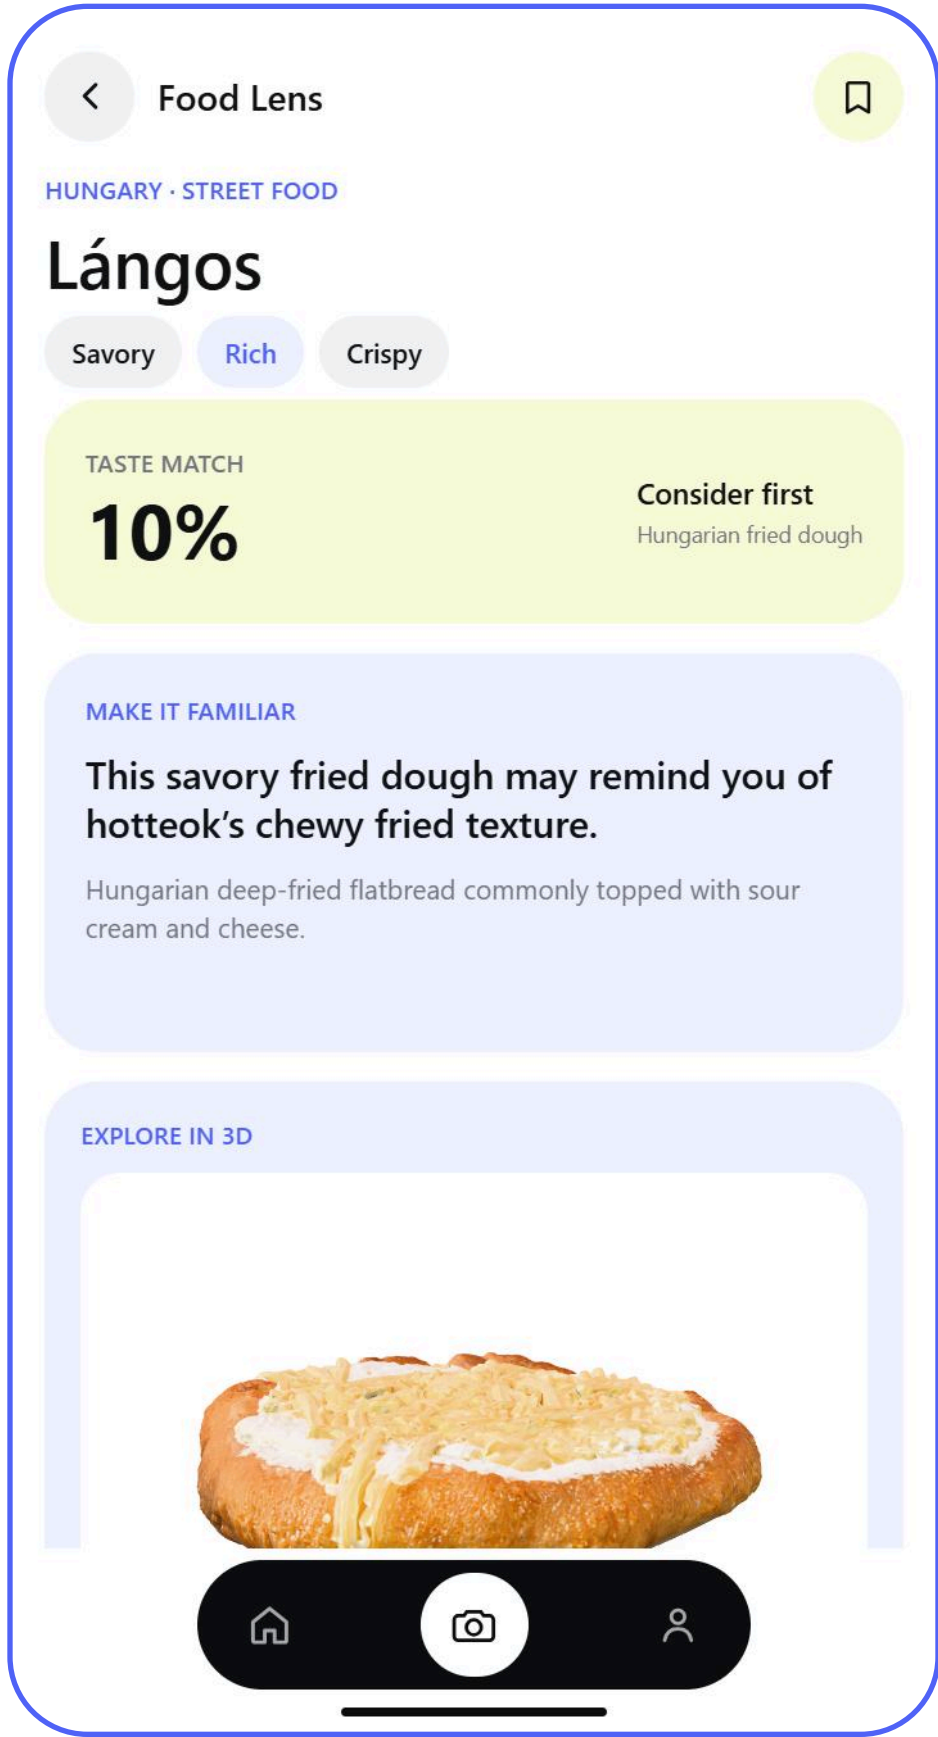

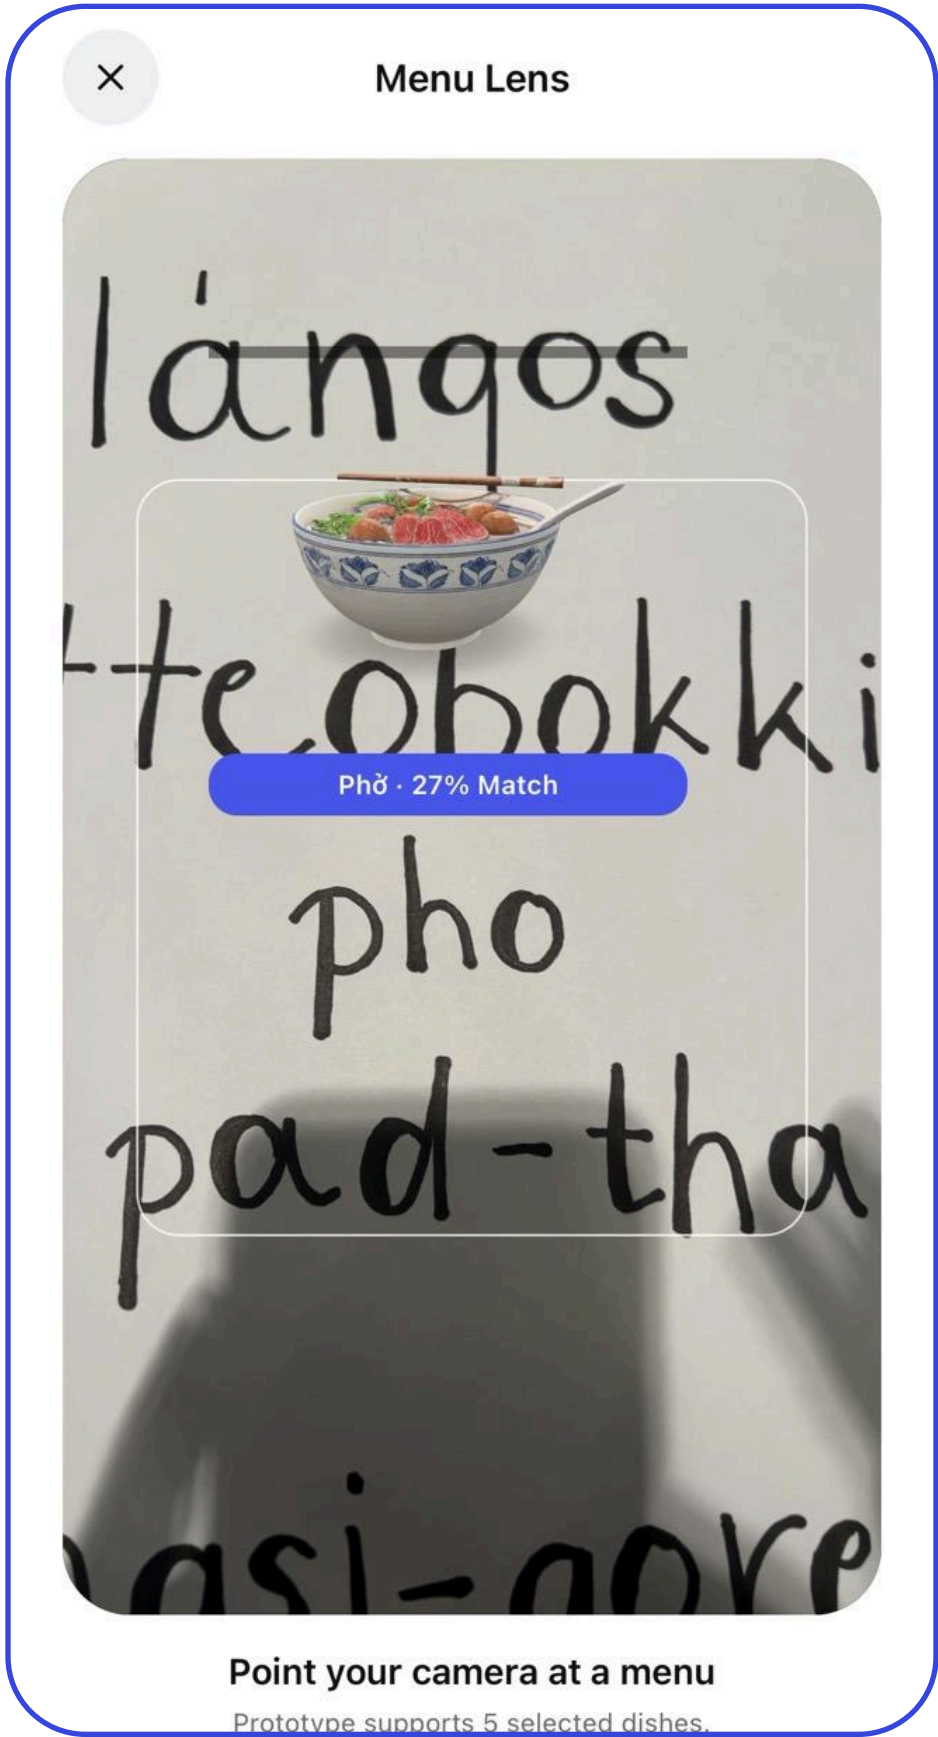

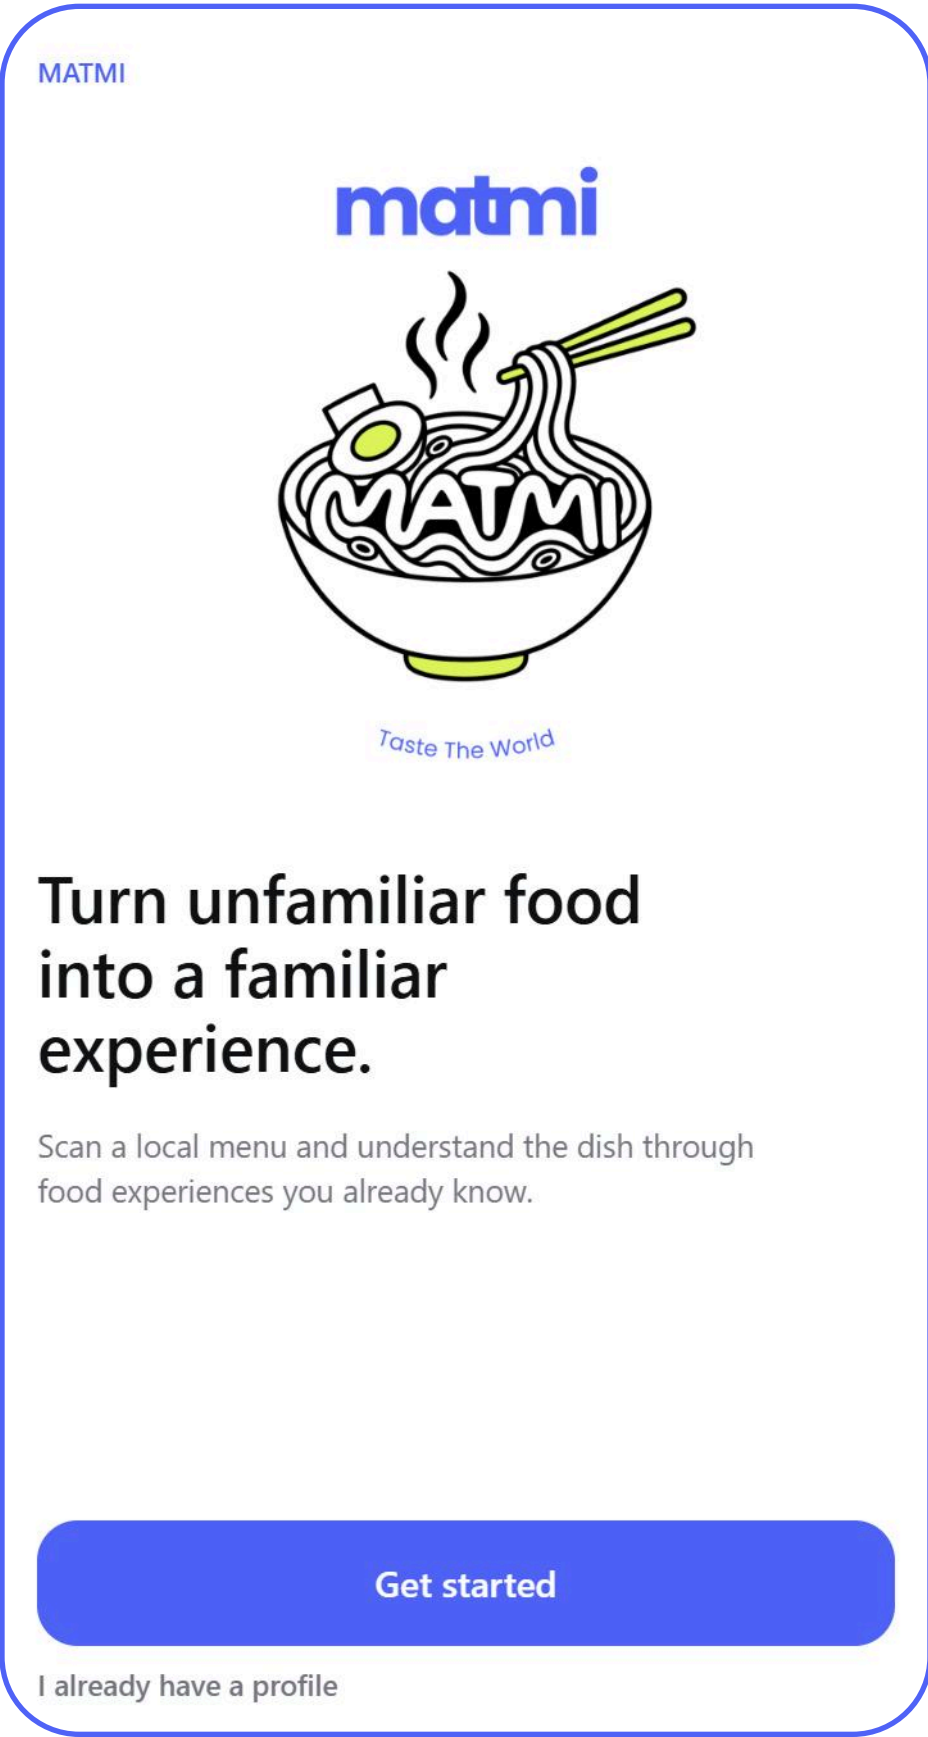

Look · Taste · Texture · Ingredients · Cautions · Cultural comparison · Taste Match

CURRENT MVP

5 supported dishes

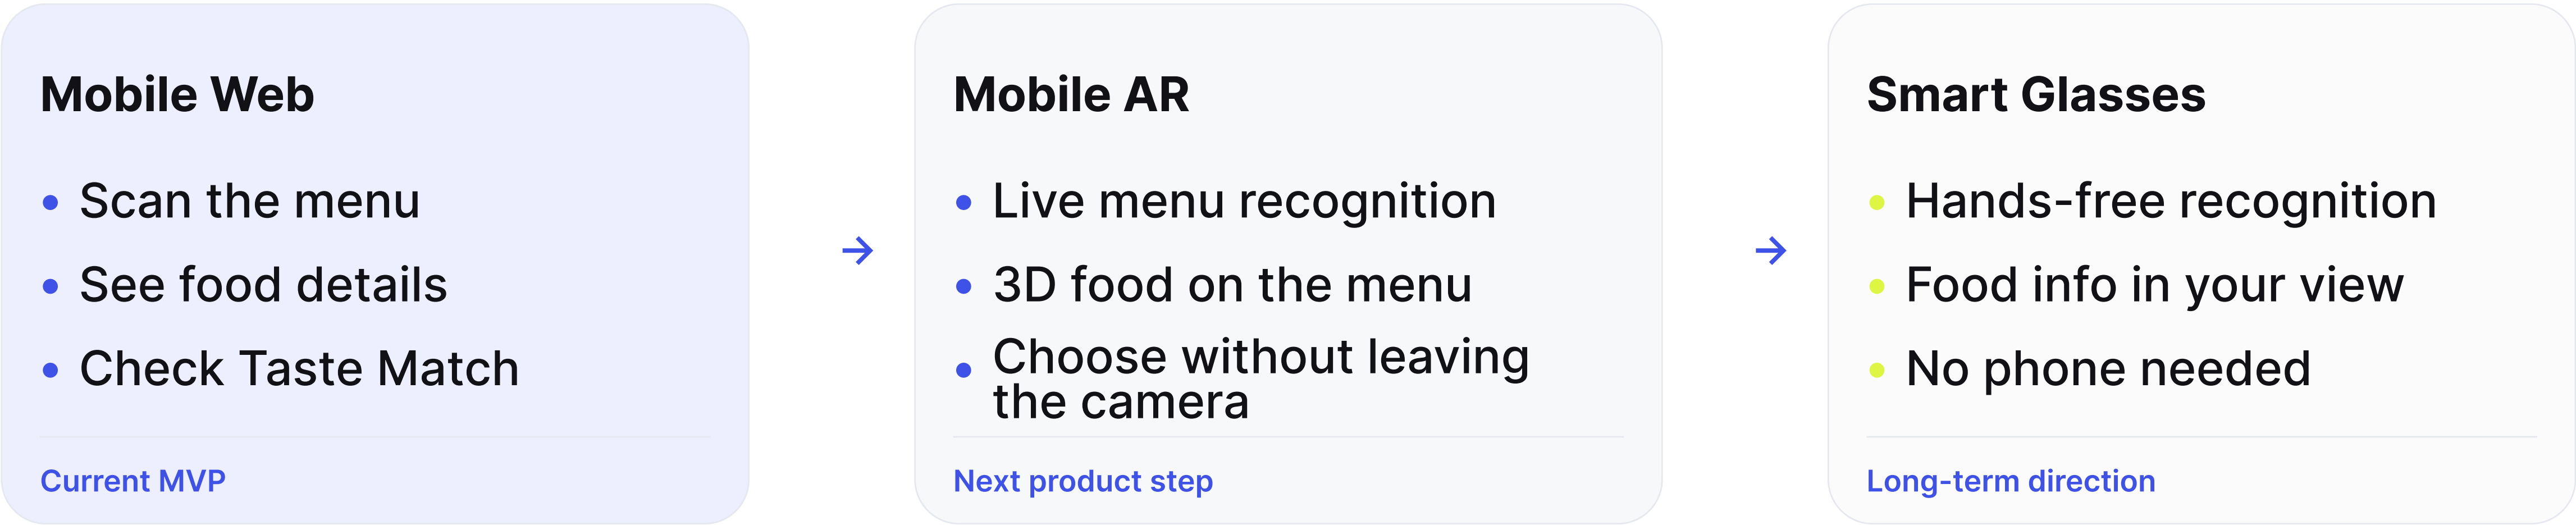

Tteokbokki · Phở · Pad Thai
Nasi Goreng · Lángos

Show the product, not more text.

From mobile to smart glasses.

As smart glasses grow, MATMI can move from a phone screen to a hands-free food experience.

WHY SMART GLASSES?

MATMI already uses the same core interaction:
camera → recognition → visual information
That makes smart glasses a natural next interface.

+212% YoY

Smart-glasses shipments

Users get a simple service. Businesses pay for better access.

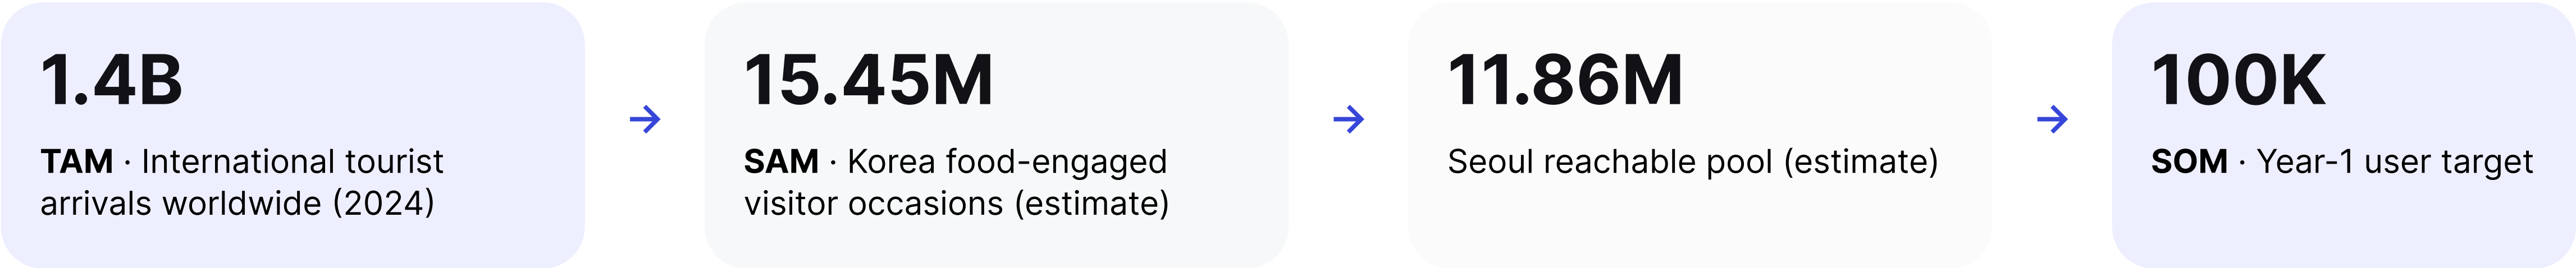

MATMI separates user growth from revenue.

B2C Traveler • Free scan + basic AR • Paid 7-Day Pass for extra features ₩6,900*	B2B Restaurant • Verified food info • Multilingual menu + analytics • Sponsored restaurant promotion ₩99,000 / month*	B2B2C Tourism Partner • Regional food packs • City / tourism campaigns Project based*
--	---	---

*These prices are test assumptions, not proven market prices.

A large travel market, with a focused first target.

We start with Korea and Seoul, then expand.

HOW WE CALCULATED IT

18.93M Korea visitors × 81.6% food activity ≈ 15.45M

15.45M × 76.8% Seoul visit rate ≈ 11.86M

Year 1 target: 100K users = about 0.84% of the Seoul estimate.

These are internal estimates built from official tourism data.

Sources: UN Tourism; Korea MCST 2025 International Visitor Survey; Seoul Metropolitan Government.

Start with one city. Build density. Then expand.

The goal is not to cover every dish on day one.

GO-TO-MARKET

- 01

Seoul pilot

Focus on tourist areas and local food.
- 02

Restaurant partners

Add verified dishes and better menu data.
- 03

Korea expansion

Grow food coverage and repeat use.
- 04

New destinations

Reuse the same model in other countries.

SIMPLE YEAR-1 SCENARIO

≈ ₩213M
Illustrative annual revenue

Restaurant SaaS	₩118.8M
3D setup	₩30M
Traveler Pass	₩34.5M
Tourism pilot	₩30M

Assumption-based. Needs real customer tests.

Competitive Analysis

Existing solutions provide information. MATMI helps users understand the food.
